

Monthly Patient Newsletter

Continuity of Care

We recognise the importance of Continuity of Care for our patients so are launching a project to help improve this commencing on the 6th of June 2026.

We have recently reviewed all our patients to ensure they are registered to a GP at their most local surgery. Where patients have been seeing a GP regularly but are not currently registered to them as their 'named GP', we have reviewed and allocated appropriately.

What does this mean for you?

- Each patient has a named GP
- Wherever possible, patients should be booked with their named GP for ROUTINE appointments
- If not available, care should stay within a small, consistent team (buddy system)
- The aim is to make care more consistent, joined up, and personalised.

We will continue to allocate appointments to the multi-disciplinary team for example, First Contact Physios, Acute Practitioners, Clinical Pharmacists and Mental Health nurses.

This Issue includes:

PPG:Patients
Supporting Patients

A guide to screen time:
Help little brains
develop healthy habits

Monthly Message from
Avon and Somerset
Police

SWIFT: Free Self-harm
Support Services

Coniston Medical
Practice Extension

And much more!

For urgent/same day appointments we will aim for continuity, but this is primarily for routine GP appointments.

What does “continuity” means in practice?

Continuity of care means patients see or speak to the same clinician or small team whenever appropriate, especially for ongoing or complex needs. It improves outcomes, reduces duplication, and builds trust.

In a personal lists system, each patient is linked to a named GP (or small clinical team) who is primarily responsible for their care.

This helps:

- Build long-term clinician–patient relationships
- Create clearer ownership and accountability
- Make care feel more joined-up and consistent

Why continuity of care matters?

Continuity of care means patients are able to see or speak to the same

clinician (or small team) over time. This isn't just a preference—it has real impact:

- Better health outcomes – clinicians who know the patient well can spot changes earlier and manage conditions more effectively
- Safer care – fewer missed details, less duplication, and clearer follow-up
- Stronger relationships – patients feel heard, understood, and more confident in their care
- More efficient use of appointments – less time repeating history, more time making decisions
- Lower pressure on the system – fewer repeat contacts and avoidable appointments

For patients with ongoing, complex, or sensitive issues, continuity can make a significant difference to their experience and outcomes.

Please keep an eye out for further updates in the next newsletter.

Routine Appointment

For non-urgent health concerns, follow-ups, or ongoing care (e.g. medication reviews, chronic condition check-ins, general health advice). These appointments are typically scheduled in advance – within 2 weeks of requesting an appointment..

Urgent Appointment

For issues that are not life-threatening but require attention within a short time frame (e.g. new symptoms, infections, worsening of a known condition). These are offered on the same day through our Duty Doctor list. You may be asked to visit an alternative surgery instead of your preferred site.

Please phone for an urgent appointment. Do not complete an eConsult

Emergency

For severe or life-threatening conditions that require immediate medical attention (e.g. chest pain, severe difficulty breathing, suspected stroke). These situations should involve calling 999 or going to A&E.

Patients Supporting Patients

You Spoke. We Listened. Now We're Acting

Over the past year, more than 3,000 patients registered with Mendip Vale Medical Group (MVMG) took part in our survey, with over 1,700 also sharing detailed feedback in their own words. This level of engagement reflects a strong sense of trust, which we have taken seriously. Our Patient Participation Group (PPG) in North Somerset — Patients Supporting Patients — has carefully reviewed this feedback to understand where services are working well and where improvements could further strengthen patient experience and safety.

NHS England's Primary Care Patient Safety Strategy (February 2025) highlights the importance of involving patients in shaping safer care, and the PPG is contributing to this aim. While national data indicates that avoidable harm can occur in general practice, we have not identified specific incidents within MVMG; rather, our focus is on reducing potential risks and improving systems proactively. In the coming months, the PPG will share their findings with MVMG and look forward to working together on the opportunities identified. If you would like to be involved sharing your experience, joining a conversation, or simply knowing your voice has been heard — please get in touch. This work belongs to all of us.

A GUIDE TO SCREEN TIME

UNDER 5s

How to help little brains develop healthy screen habits

How much screen time

should my child have?

Young children's brains are over-stimulated more easily than adults', so they need specifically tailored content.

Slow paced content: Choose content with simple stories and clear, slow speech, so emotions are easy to follow.

Limit total screen time, wherever possible.

Under 2 yrs: Avoid screen time except shared activities with family that encourage bonding and interaction.

2-5 yrs: Try to keep to 1 hour a day. Less if possible.

What content is better content?

Safe content: Use parental controls to block inappropriate, harmful material.

Social media: This isn't made for young brains, so it should be avoided.

AI: Don't let them use AI toys, tools, or chat-bots until we know more about their effects on children.

Safe screen swaps: Switch fast-paced style videos for slower-paced content with simple stories.

How does my screen use

affect my child?

Set clear boundaries for screen use. This gives children time for activities and play that help them develop.

Avoid young children using screens alone. Try to keep bedrooms and mealtimes free from screens.

Why not try... watching and discussing content with your child? Conversation helps their development.

Lead by example: Children's brains are like sponges – they'll copy your screen use habits. Be mindful of how often you use screens around your child.

Children with disabilities or special educational needs may benefit from tailored screen use. And for some, assistive technology can be an important tool for communication and everyday participation.

My child has SEND.

Is the advice the same for us?

They also need ample time for interaction, play, and sleep. Try to avoid screen time for these activities.

When and where

is it okay for my child to use screens?

How does screen time affect my child's development?

Large amounts of screen time are linked with negative effects on children's health and development. It can affect social, emotional, language & brain development, sleep, eyesight and weight.

Young children learn best through warm interaction with parents and carers – reading, play and conversation. These early moments build the foundations for life.

The government has published new, evidence-informed guidance to help parents and carers of children under 5 navigate screen time. With digital screens now a normal part of family life, this guidance offers practical advice to support informed choices to help little brains develop healthy screen habits. The guidance recommends:

- For under 2s - avoid screen time, other than shared activities like video calls with family or looking through photos together. For 2–5s: try to keep it to no more than 1 hour a day - less if you can.
- Choose slow-paced, predictable content with simple stories, fewer scene changes and characters who speak clearly. Avoid fast-paced, social media-style videos – these may affect a child's ability to concentrate.
- Children copy everything you do so try to limit your screen use around your child.
- Keep bedrooms and mealtimes screen-free. Try to swap screens before bed for a bedtime story and avoid screens for the hour before sleep as they can disrupt rest.
- Try not to let young children use screens alone – watching together means you can chat about what you're seeing and spot anything inappropriate.
- The key is making sure screens don't replace sleep, physical activity, play or quality time with you.

90% of brain growth happens before the age of 5. The interactions children have in these early years – the chats, the games, the stories, the back-and-forth conversations – lay the foundations for language, problem-solving, emotional understanding and self-control.

Large amounts of screen time have been linked to negative effects on social, emotional and language development, as well as sleep, eyesight and healthy weight. However, the good news is that small, simple swaps can make a big difference. 5 For more advice on how to help little brains to develop healthy screen habits visit the [Best Start in Life website](#),

Monthly Message from Avon and Somerset Police: Spotting Counterfeit Bank Notes

'Most people who encounter a counterfeit bank note do so without realising. Unlike the note above, it can be really hard to spot counterfeit notes. We have recently seen a rise in reports of the use of counterfeit notes. Knowing a few simple things to look for can help protect you from financial loss and worry.

.Trust Your Senses

Genuine UK bank notes (now made of polymer) have a distinct feel:

- They feel slick and flexible, not waxy or overly smooth
- Raised print can be felt on areas like the main wording and the Queen/King's portrait. If a note feels unusual, it's worth taking a closer look

Check Key Features: How to Spot a Fake Bank Note

- Look at the clear window Real £20 notes have a clear plastic window with a picture of the King or Queen in it. The edges should be sharp and clear, not cloudy.
- Tilt the note A shiny silver patch on the front should change words when you move the note, such as changing from "Twenty" to "Pounds".
- Feel the note Some parts of a real note feel slightly raised, especially the words "Bank of England" and the number.
- Don't trust marker pens Fake-note pens don't work properly on modern plastic notes and shouldn't be relied on.
- Compare if unsure If something feels wrong, compare it with a note you know is real. Differences are easier to spot together.
- Use safer payments if you can Bank transfers can be safer than cash. If you do take cash, check each note carefully before handing anything over

Look for Consistency

If you're handed multiple notes:

- Compare them with each other
- Genuine notes should look and feel the same A single note that looks different from the rest is worth checking.

If You're Unsure About a Note - If something doesn't feel right:

- Don't spend it or accept it
- Take it to your bank, who can check it safely and advise you
- Banks deal with this regularly and can help without judgement
- Be conscious when selling things via social media or taking cash payment for any item

SWIFT: Free Self-harm Support Services

We are a Bristol based charity that supports people across the UK affected by self-harm. We provide free Listening Services via phone, text and email in partnership with the Lottery Community Fund. We also provide Peer Support Services by referral, in partnership with the NHS.

You can contact Swift:

Phone Us
0808 8008088
Monday & Thursday: 6-9 pm

Text Us
07537 432444
Monday to Friday 6-9 pm

Email Us
tess@sift.org.uk
Email any time, we'll reply within a week.

Write to Us
14 Upper Maudlin Street, Bristol,
BS2 8DJ
Write any time, we'll reply within a week.

What happens when you contact Swift?

- You'll speak with one of our specialist-trained volunteers.
- It's a safe, confidential space to share your experiences and emotions around self-harm, and anything else you wish to talk about.
- We can share information and resources with you if you want us to.
- We won't judge or tell you what to do.
- We are here to support anyone of any age or gender affected by self-harm.

For more information go to the SWIFT website: [Listening support for self-harm - Sift Self-harm helpline](#)

Did you know you can order your prescription in advance?

Up to **10 days** for **controlled drugs** and **14 days** for **repeat prescriptions**.

Working days are **Monday to Friday** only. Please note, **Bank Holidays** are **non-working days** and should be considered when ordering your medication.

If you have any concerns regarding a patients prescription, please contact our Prescriptions Team at - bnssg.mvmg.brs.prescriptions@nhs.net

Coniston Medical Practice Extension

We're excited to share that Coniston Medical Practice is about to get a little bigger...

Made possible through £916,566 of Utilisation and Modernisation Funding from NHS England, alongside £468,000 in S106 funding linked to the Filton Airfield housing development, our site is now undergoing a significant expansion.

In the next couple of weeks, the diggers roll in and the hard hats go on as work begins to create eight brand-new consultation rooms—because when a community grows, its healthcare services need to grow with it.

We're aiming to complete the works by September, and we're thrilled to see this exciting development become a reality.

Jo Clayson, Divisional Director at Mendip Vale Medical Group, said:

“We are pleased to be investing in our practice with the support of the ICB Estates Team to deliver much-needed additional capacity for our patients. This expansion and modernisation will enable us to make more effective use of our space, improve accessibility, and support our teams to provide care to more patients in a safe, comfortable environment. The additional clinical space will increase appointment capacity, helping us meet the needs of Coniston's growing population.

“We are working closely with our contractors to minimise disruption during the construction phase, and patients will continue to access services as normal throughout the works which are due to be completed in September.”

Newsletter Feedback

We're always looking for ways to improve how we communicate with our patients — and that includes our newsletter. Whether you found it helpful, had suggestions for new topics, or felt something was missing, we'd love to know what you think.

Our newsletter is created with you in mind, aiming to keep you informed about health advice, local services, new treatments, and how to get the most from your NHS care. But we can only make it better with your input!

Share your thoughts:
